

Product Backlog

Features (for the scope of the class):

As a group we want our application to offer the following:

- Soil information based off NRCS database.
- Micro climate info from Sunset database.
- Crop suggestions based off soil type and climate.
- UI for information on how to start and maintain a healthy garden.
 - How to build stuff for garden ◦ which fertilizers to use
 - how to start seeds
 - how to transplant
 - when to water and for how long
 - could expand to mesh of live data for a more advanced gardening experience.
